

CLOCKFACE+

AURORA

THE FACE OF BIOMETRICS

FACIAL RECOGNITION FOR TIME, ATTENDANCE AND ACCESS CONTROL

CLOCKFACE+ USES STATE OF THE ART FACIAL RECOGNITION TECHNOLOGY TO VERIFY STAFF IDENTITY.

- **World Leading** Facial Recognition Technology for fast, accurate **non-contact verification of identity**
- **Stand Alone** operation or integration with **Turnstile** or **Access Control** systems
- **Extensive management software** for Time & Attendance and Personnel Database
- Displays **Health & Safety graphics** to users
- Suitable for **any size of workforce**

Developed in the UK and in use worldwide **ClockFace+** is a fast, highly accurate Biometric system which offers a number of hygiene and speed advantages over more traditional technologies, such as fingerprint and palm readers. **ClockFace+** can be used as a stand-alone method of recording attendance or to control physical access via a turnstile or door access system.

Users simply enter a pin code and stand briefly in front of the unit whilst Aurora's unique, near IR Facial Recognition algorithm verifies their credentials and logs the clocking event. With the whole process taking a few seconds, entry and exit to site is fast, efficient and the process totally eliminates "buddy punching". In addition there are no cards or other tokens to lose and in most cases staff won't have to remove PPE to clock on or off. Users can also receive Health and Safety and other messages, targeted at groups or individuals, via the built in feedback screen.

ClockFace+ is supplied with **ClockFace Manager** software, a comprehensive reporting, administration and analysis tool. **ClockFace Manager** maintains key personal information, including training qualifications, employment contracts and holiday entitlement. Managers can easily generate and export Time & Attendance reports for employees, temporary staff and contractors as well as monitor compliance in acknowledging Health & Safety and other messages. Our optional TimeKeeper software package enables direct integration with leading Payroll systems, automatically applying complex shift and work patterns to significantly reduce administration costs.

ClockFace+ is part of a wide range of Facial Recognition and Time & Attendance products from Aurora, including **MobileClocking** and **TabletClocking** for different types of application. All are designed and built in the UK and backed by over 10 years' experience in the field.
